Fact Sheet:

AAPI LGBTQ+
Experiences of GBV
June 2023

This factsheet summarizes the layered needs and experiences of lesbian, gay, bisexual, transgender, queer, and more (LGBTQ+) Asian, Asian American, and Pacific Islander (AAPI) survivors and communities in the U.S., based on the current literature available. Although limited research has been conducted on this topic, we present findings that capture the range of experiences, track current trends and prevalence rates regarding gender-based violence (GBV), and bring to attention to areas of need.

AAPI LGBTQ+ survivors might identify in ways beyond those encompassed by the LGBTQ+ umbrella identities. We recognize that not all communities will identify with the LGBTQ+ umbrella, or with the modern connotation of some LGBTQ+ identities. For the purposes of this factsheet, we will use LGBTQ+ to include non-heterosexual and non-binary identities.

“Terms for LGBTQ communities in Asia and the Pacific include fa’afafine in Samoa and American Samoa, fakafefine (also fakaleiti) in Tonga, Māhū in contemporary Hawai’ian culture, ‘tomboy’ and bakla in the Philippines, and kathoey or ‘ladyboys’ in Thailand. In South Asia, India’s 4,000-year-old transgender and intersex community use hijra — as do those in Nepal, Bangladesh and Pakistan (where khwaja sira is also used).”

For a glossary of more terms that are encompassed by the + in LGBTQ+, as well as related terms, see https://pflag.org/glossary/

For a roundtable report that includes advocate and expert perspectives on gender and oppression among LGBTQ+ AAPI communities, see: https://www.api-gbv.org/resources/api-lgbtq-roundtable/

https://www.api-gbv.org/about-gbv/types-of-gbv/lgbtq-intimate-partner-violence/
Prevalence Rates of GBV against LGBTQ+ AAPIs

According to a study\(^1\) that analyzed Asian American-specific data from the 2015 U.S. Transgender Survey:

- **Over half (52.4%) of transgender Asian Americans, including non-binary, gender-queer Asian Americans, experienced abuse or violence from a romantic or sexual partner.**
- **Non-binary and gender-queer Asian Americans were significantly more likely than cisgender lesbian and gay Asian American peers to experience any abuse or violence.**
- **57.5% of non-binary and other gender-queer Asian Americans, 59% of transgender Asian women, and 62.8% of transgender Asian American men experienced partner abuse or partner violence.**

In another study\(^2\) that drew data from the 2015 U.S. Transgender Survey, it was found that **Middle Eastern and Northern African participants reported significantly higher rates of:**

- Psychological IPV (OR: 2.0, 95% CI = [1.3, 3.1])
- Stalking (OR: 1.8, 95% CI = [1.1, 3.0])
- And forced sex (OR: 1.8, 95% CI = [1.1, 2.9]) compared to their peers\(^2\).

- **20% of ANHPI lesbian individuals experienced sexual abuse,** according to a pilot study\(^3\) in California that explored the experiences of lesbian and sexual minority women.
- **South Asian LGB+ respondents were slightly more likely (62.4%) to have experienced contact-based sexual violence** compared to their heterosexual counterparts (59.6%), according to a community survey\(^4\) in New York.
- **The same community survey\(^4\) found that LGB+ South Asians were almost twice as likely (17.2% vs. 9.6%) to experience multiple instances of rape** compared to their heterosexual counterparts.
Risks Factors for GBV and Intersecting Areas of Need

For LGBTQ+ AAPIs, there are multiple layers of stigma that of having multiple identities (such as being lesbian and AAPI and surviving partner violence) where outing\(^2\) can be a strategy for an abuser to assert and maintain control in a relationship. Being outed can threaten a survivor’s safety, housing, and network of social support.

**Mental health**

A study\(^1\) that analyzed Asian American data the 2015 U.S. Transgender Survey found that transgender and non-binary Asian Americans survivors of partner violence reported higher rates of suicidal thoughts (88.3% vs. 76.5%), suicidal actions (53.2% vs 33.3%), and serious psychological distress (45.3% vs. 25.5%) compared to transgender and non-binary Asian Americans who were not experiencing partner violence.

**Immigration status**

According to a national study\(^6\), more than one in ten (13.6%) undocumented LGBT adults are Asian or Pacific Islander— similar to the proportion of all Asian or Pacific Islander (14.0%) out of all undocumented adults in the US.

**LGBTQ+ Asian Americans’ safety and health across the lifespan**

An estimated 2.8% of Asian Americans identify as LGBT and 26% of Asian LGBT are 40 years or older. Older LGBT Asians had a higher psychological distress score compared to non-LGBT Asians. Among Asian LGBT older adult respondents of the California Health Interview Survey, experiencing discrimination in medical care and intimate violence were associated with higher levels of psychological stress\(^7\).

A study\(^8\) that analyzed API-specific data from the 2012 National Transgender Discrimination Survey found:

- 14% of API respondents reported experiencing homelessness at some point in their lives, almost twice the rate of the general U.S. population (7.4%).
- 21% of API transgender and gender non-conforming people reported having been refused a home or apartment due to bias.
- API transgender and gender non-conforming people experience unemployment at a higher rate (12% vs. 7%) than the general US population.
API transgender and gender non-conforming people are experiencing violence in the workplace: 49% of API transgender and gender non-conforming respondents were harassed, 8% were physically assaulted, and 10% were sexually assaulted at work.

According to a local needs assessment surveying transgender, non-binary, and gender-nonconforming AAPIs living in the Bay Area of California:

- Disabled respondents were more likely to experience sexual assault (77%) and domestic violence (57%) compared to their non-disabled peers.
- Respondents who experienced homelessness in their lifetime were also more likely to experience sexual violence (76%) and domestic violence (76.7%) compared to participants who never experienced homelessness.

The same needs assessment reported priority areas of need for transgender, non-binary, and gender-nonconforming AAPI adults living in the Bay Area of California. The following were priorities among the respondents overall:

- Housing Justice
- Health Access and Healthcare
- Immigrant Rights and Justice

The top priorities by AAPI region are as follows:

**East Asians:**
1. Housing Justice
2. Health Access and Healthcare
3. Immigrant Rights and Justice

**Pacific Islanders:**
1. Immigrant Rights and Justice
2. Addressing Interpersonal Violence
3. Building API Community Support

**South Asians:**
1. Health Access and Healthcare
2. Housing Justice
3. Immigrant Rights and Justice

**Southeast Asians:**
1. Housing Justice
2. Health Access and Healthcare
3. Immigrant Rights and Justice

---

See definition in glossary.
AAPI LGBTQ+ Students

A national study\textsuperscript{10} surveyed AAPI LGBTQ students in grades 6 through 12. The majority (87.7\%) of students attended public school, and more than half (56.5\%) of students attended predominantly White schools.

Safety and LGBTQ+ Identity

Transgender and gender-nonconforming AAPI students experienced \textbf{greater levels of victimization} based on sexual orientation and gender expression than cisgender LGBQ AAPI students\textsuperscript{10, 11}.

- 82.3\% of AAPI LGBTQ students heard negative remarks about transgender people; over a third (35.5\%) heard these remarks often or frequently.
- Many AAPI students experienced \textbf{harassment or assault at school} based on personal characteristics, including \textit{sexual orientation} (60.5\%), \textit{gender expression} (54.7\%), and \textit{race/ethnicity} (53.8\%)\textsuperscript{10}.
There is a need to disaggregate data by AAPI ethnicities and regions, as well as by LGBTQ+ identities. The California Healthy Kids Survey explored the experiences of LGBTQ+ students from 7th, 9th, and 11th graders in California public schools. According to a study\(^{11}\) that analyzed Asian American-specific data, including 9+ Asian American ethnicities:

**41.1% of Cambodian transgender students were beaten up** compared to 27.1% of white transgender students\(^{11}\).

Areas for Future Research:

While this factsheet provides an overview of current GBV trends and needs of LGBTQ+ AAPI communities and survivors, there are still many areas of unmet needs, and many communities who are not represented in current reports or research. The following identifies several of those areas where more research is needed:

- **Basic needs (such as safe housing, gender-affirming healthcare, HIV treatment/prevention/PREP) for transgender and non-binary AAPI survivors, communities, and young people**
  - Culturally-responsive prevention, healing practices, programs, and allyship toolkits for advocates and professionals working with transgender and non-binary AAPI survivors.
- **Needs of LGBTQ+ AAPI survivors who are elders, immigrants, and survivors living in rural environments.**
  - Work that focuses on individual identities (i.e., culturally-reflective DV and SA prevention and healing for LGBTQ+ Pacific Islander survivors and communities).
  - Community-based participatory action research: more peer-led work and community partnerships. See example of qualitative research about needs of queer AAPI women experiencing partner violence
- **Culturally-informed guidance and linguistically specific services**
  - hijra, Fa’aafine, fakaleiti/fokeleti/fakalati/fakafefine, Māhū, tritiya-prakrati, bakla are only a few of many non-heterosexual, third gender, and/or non-binary terms used in our cultures—and language and connotations change over time.
- **Data disaggregation for AAPI communities and LGBTQ+ identities**
  - While this report includes national studies, some of these studies collapsed findings from Pacific Islander responses with Asian and Asian American respondents, which can hide disparate rates of GBV for subpopulations such as Pacific Islander LGBTQ+ survivors and communities. Many studies also do not disaggregate between Pacifica communities, which also can obscure needs.
  - The LGBTQ+ umbrella also encompasses many identities and lived experiences. There is a need for data collection methods that are inclusive to non-binary and gender-nonconforming people.
Glossary of terms

**Cisgender** – refers to a person whose gender identity matches the sex they were assigned at birth; in other words, someone who is not trans.

**Deadname** – using a transgender person’s legal or former name without their consent, instead of using the name they choose.

**Disabled** – this report uses the term “disabled people”, rather than “people with disabilities”, to emphasize the ways our world is often not equipped to allow disabled people to flourish.

**Gender Binary** – the idea that there are only two genders (male/female or man/woman) and that a person must be strictly gendered as either/or.

**Gender Expression** – how a person expresses their gender identities. Ways of expressing gender can include clothing, voice, body hair, posture, and more.

**Gender Identity** – is how a person views and identifies themselves. Gender identity does not always match the sex people are assigned at birth.

**Gender Non-Conforming** – refers to a person who does not follow other people’s ideas or stereotypes about how they should look or act based on the sex they were assigned at birth.

**Housing Justice** – refers to valuing and advocating for affordable housing, rent control, and renter power. Transgender & gender non-conforming APIs can experience transphobia, racism, and xenophobia in housing.

**Intersex** – a term used for a variety of experiences in which a person is born with anatomy that doesn’t match biological definitions of female or male.

**Non-Binary** – a spectrum of gender identities that exist beyond the man/woman gender binary.

**Outing** – when a partner or a third party shares a closeted person’s LGBTQ+ identity without permission.

**Queer** – encompasses identities such as transgender, lesbian, gay, bisexual, intersex, asexual, and other LGBTQIA+ identities. Often used to self-identity; can be used as a derogatory slur.

**Sex Assigned at Birth** – the category doctors assign to people when they are born. The sex assigned to individuals usually results in an assigned gender and added expectations.

**Transgender** – an umbrella term that refers to a person whose gender identity differs from the sex they were assigned at birth.

**Transphobia** – a range of negative attitudes (e.g., fear, anger, intolerance, resentment, erasure, or discomfort) that one may have/express towards transgender individuals. Transphobia can come from within the queer community as well as cisgender/heterosexual society.

About the Asian Pacific Institute on Gender-Based Violence (API-GBV):

API-GBV is a national resource center on domestic violence, sexual violence, trafficking, and other forms of gender-based violence in Asian/Asian-American and Pacific Islander (AAPI) communities. We envision a world free of gender-based violence for communities with equal opportunities for all to thrive.

Visit our Resource Library (api-gbv.org/resource-library) for more factsheets, tip sheets, reports, training materials, and other resources.

This factsheet is sponsored by Grant Number 90EV0526 from the Administration on Children, Youth and Families, Family and Youth Services Bureau, U.S. Department of Health and Human Services.
